

Supplemental Figure S2. Rapid *in vitro* internalization of CpG-STAT3ASO by various types of mouse immune cells. Mouse splenocytes were incubated with the indicated concentrations of CpG-STAT3ASO^{Cy3} for 1 h without any transfection reagents. The oligonucleotide uptake by immune cells: B cells (B220⁺CD11c⁻), macrophages (MACs; F4/80⁺Gr1⁻), T cells (CD3⁺) and DCs (CD11c⁺), was assessed using flow cytometry.
